

QC Series of Oval Cylinder Key-Switches

Royce's Quick Change Cylinder series of key-switches allows you to combine the highest quality electrical switch with the key system of your choice. Simply attach the cam provided to the back of a standard oval cylinder, insert the cylinder and retaining pin into the housing and you're ready to install! This makes adding a Royce QC series switch to an existing master key system as simple as loading an oval cylinder! Royce's QC series of switches comprises four standard models whose functions cover the majority of basic switching applications including roller doors, escalators, alarm systems, automatic gates, production line machinery, air-conditioning units and many more.

The simplicity of the QC series design makes for easy repair and replacement of the cylinder as well as increased reliability through the reduced number of moving parts. Reliability is also increased through the use of a steel cam and brass drive shaft rather than a plastic alternative. Custom escutcheon engraving is available, please consult your distributor. Royce Quick Change Key-Switches: simple and effective.

Important Notes:

1. **Easy Assembly:** Any locksmith can change the cylinder in this switch in 30 seconds. Simply swap the cam from the old cylinder to the new and you're away.
2. **Cost effective.** Royce are very committed to keeping this product as competitive as possible.
3. **Versatility:** Using the oval cylinder allows us to put this switch on any master-key system in Australia.
4. **Less work for Australian Solenoid sales staff!:** Let the end user organise keying through their current locksmith. Simply supply the switch with the standard cylinder and let the locksmith organise the keying system.
5. **Reliability:** Brass drive-shaft & steel cam will not wear noticeably over the lifetime of the product!
