## UNIQUE, PRACTICAL AND CREATIVE DESIGN TECHNIQUES

### ROYCE SECURITY PRODUCTS

Royce Security Products is an Australian owned and operated company specialising in the design and manufacture of application specific security products. Royce utilises unique, practical and creative design techniques to create products that are focused on quality and performance. Royce's industry experience, gained through the creation of products for specialised security applications, translates into a unique understanding of the delicate relationship between product quality and cost effectiveness. With Royce Security Products you can always be assured that the product you receive is of superior quality at a competitive price!

### ROYCE ACCESS VAULT

The Royce Access Vault is a wholly Australian made and owned product designed to allow maintenance contractors and emergency services access to secure locations while minimising the risk of lost keys. Rather than supply master keys to lift or security contractors simply store one set of keys in your Royce Access Vault and supply your contractors with a key to open the vault. If a key for the vault is lost the vault's oval cylinder can be replaced simply and cost effectively.

The Royce Access Vault combines a low profile design with an ingenious tamper resistant cap to eliminate the risk of casual interference with the lock mechanism. The vault door itself contains an Australian Standard oval cylinder that can be keyed to high security systems such as BiLock, Lockwood Twin, KABA or Abloy. The flexibility of the oval cylinder allows the vault to be changed to any key system, meaning that an appropriate lock can be installed for any contractor or organisation that requires access to a site.

Having to re-key an entire building due to lost master keys can cost tens of thousands of dollars! The Royce Access Vault enables you to store your keys securely while still allowing access to your building for contractors and emergency services!
